Scene Size-Up and 360-Degree Assessment

Name:	
Evaluator: _	
Date:	

Instructions:

- Assess the firefighter's performance during a simulated or real-life scenario involving scene size-up and 360-degree assessment.
- Mark each competency as "Satisfactory" or "Needs Improvement" based on the firefighter's performance.
- Provide specific feedback and comments as necessary.

Initial Report to Dispatch:

- Provides accurate and concise initial report to dispatch.
- Communicates incident address, type, and immediate hazards effectively.

Approach to the Scene:

- Demonstrates situational
- Size-Up from the Street:
- Observes exterior of the structure and surrounding area.
- Identifies building type, construction materials, and occupancy.
- Notes visible signs of fire or smoke.

Initial Actions:

- Takes appropriate initial actions (e.g., deploying hose lines, establishing incident command).
- Demonstrates readiness to initiate firefighting operations.

360-Degree Assessment:

- Conducts systematic rotation around the structure.
- Observes all sides of the structure and identifies openings, hazards, and signs of fire.

Utilities and Access Points:

- Identifies utility shutoff locations and access points for firefighting operations.
- Notes the location of fire hydrants and other critical resources.

Adjacent Structures and Exposures:

- Evaluates adjacent structures for potential fire spread or involvement.
- Identifies exposure risks and considers appropriate measures.

Communication with Incident Command:

- Communicates findings to incident command and or dispatch clearly and concisely.
- Provides timely updates on scene conditions and observations.

Overall Performance:

Satisfactory

Needs Improvement
